

I am a child living with HIV. I face these issues.

I get sick often, but my mother has no money to pay for the clinic

My parents both died of AIDS and I live with my grandmother

I am scared that I will die because my baby sister died

Children will not play with me in school, because they know I have HIV

My HIV medicine stopped when my family moved to a different village

The school does not teach us about our bodies or sexual health

People whisper that I have something bad, but I do not understand

I have dropped out of school, because I am often sick

I worry about my mother because she gets ill often
